

**Super Market Merchandising**, in a continued effort to bring you innovative products, is proud to offer alternative materials for your next project.

Along with environmental advantages, traditional-wood alternatives have proven to be an excellent candidate for furniture and construction. With tests proving it to be **50 times stronger than oak** while remaining lighter in weight with an aesthetically pleasing grain, Bamboo is the perfect fit for our industry.

Your customers will immediately notice the uniquely modern appearance of the grain. With several finishes available to enhance its natural beauty, bamboo is being used widely in high-end furniture design. We want to see the same high-end appearance in your stores.

Contact us to discuss projects that may lend themselves to this remarkable material.
